

PANOLIN under water

When Mayflower Energy specified a hydraulic fluid for their LBT1 subsea cable burial tractor (used to install cabling between turbines as part of an offshore wind farm installation), they had two distinct criteria to minimise their impact upon the marine environment, and to maximise the performance and reliability of their equipment.

The high performance and long life characteristics of PANOLIN HLP SYNTH, coupled with its superb environmental credentials, made PANOLIN the natural choice for this exciting and innovative project. Controlled from the Mayflower Resolution vessel, the LBT1 tractor has already been involved in the UK's first large scale offshore wind farm, and is set to carry on its work at other destinations as the demand for renewable energy continues to grow.
