

PANOLIN oils as factory fill

Now that all Environment Agency tenders for work on SSSIs or near to water specify the use of biodegradable hydraulic oil, it is good to know that these oils are available as factory fill.

PANOLIN have been working closely with a number of OEMs to ensure that new machinery is filled with PANOLIN HLP SYNTH prior to delivery.

For example Caterpillar, Hitachi, JCB and Volvo all offer this facility.

Machines recently bought by Land & Water Services Ltd, WM Plant, Tom Blackwell Ltd and numerous IDBs were all delivered with PANOLIN HLP SYNTH 46 as the preferred choice of biodegradable hydraulic fluid.

Tom Blackwell Ltd is currently working on a sewer upgrade at Tilbury Docks and both Land & Water Services Ltd and WM Plant were involved with a Marine Civil Engineering project to re-route and straighten a canal as part of the Hempstead Bypass Road Works, Gloucester.

PANOLIN continue with their after sales service of oil condition monitoring and are busy working with customers to ensure that there are no contaminants in the oils. «We are looking for contaminants such as water and other lubricants that would reduce the performance level of PANOLIN HLP SYNTH, after all the London Eye has still not had an oil change and has completed over 50'000 hours of operation», said Derrick Simpkin from PANOLIN.
