

## PANOLIN in the Zone

Working in the London Low Emission Zone requires operators to employ the very latest low exhaust emission engine technology. Land & Water specified these engines for its new Hitachi excavators.

In addition, Land & Water is preparing for the introduction of the Climate Change Bill which will be implemented in 2010 by specifying PANOLIN long life Environmentally Considerate Lubricants for the hydraulic system, this will help to further reduce the overall CO<sub>2</sub> emissions of these machines.

Priding themselves on being at the forefront of innovation Land & Water is also evaluating the use of additional Environmentally Considerate Lubricants from PANOLIN for the engines and gearboxes. These machines will be identified with a new CO<sub>2</sub> reduction label.

These measures will not only help to reduce their «Carbon Footprint» they will also help to improve productivity and machine serviceability.
